

# EXCAVATOR CHAINS

**DuraTrack**<sup>®</sup>

We offer a complete range of track chains from 101mm pitch to 260mm pitch to suit all types of excavators and other tracked equipment. All DuraTrack chains are grease filled and sealed for extended wear life. Polyurethane seals ensure quiet operation and prevent abrasive materials from entering the internal pin and bush, therefore reducing wear.

- **Complete range from 101mm pitch to 260mm pitch**
- **Internal bushing life is extended by around 20% compared to dry chains**
- **Rails are heat treated boron steel hardened to 48-56RC up to 10mm deep for a higher wear resistance.**
- **All pins and bushes are hardened to 55-60RC**
- **Heavy duty chains with a higher rail and larger bushes are available for some models**
